New Features for MeetingManager

Device and Asset Tracking

Create and register any asset – such as tables/chairs, flip charts, podiums/lecturns and mobile A/V carts – for inventory management. The location of items can also be tracked in real time using Anterus™ Asset Tags. Instant notifications can then be sent when these items are moved.

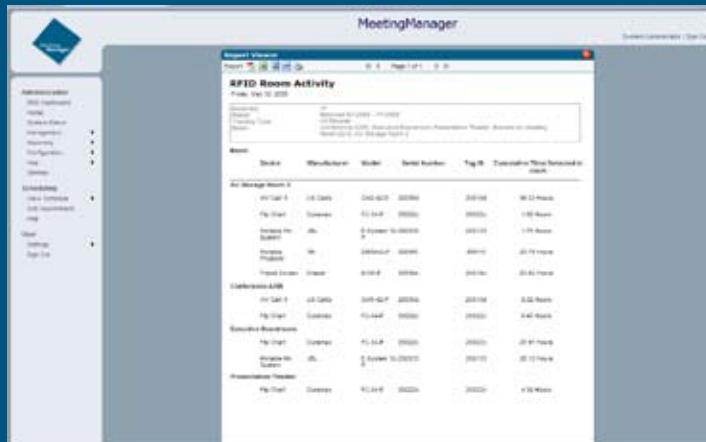

The screenshot shows the MeetingManager software interface with a search results window titled "Device Search Result". The results table includes columns for Asset Name, Device Type, Description, Model, Serial, Status, Last Seen, Last Location, and Actions. The results list various assets like "Meeting Room 101", "Meeting Room 102", "Meeting Room 103", etc., with their respective details.

Automation Based on System Conditions

Configure MeetingManager to perform a specific function as a result of a pre-defined event. For example, the system can be configured to automatically:

- Turn on a fan based on the temperature threshold in an equipment rack.
- Turn on a security light or audible alarm if a device is moved out of a zone without authorization.
- Raise and lower motorized shades based on ambient lighting conditions.
- Turn lights and non-essential equipment, such as a projector or display, on or off based on the occupancy status of a room.

The screenshot shows the MeetingManager software interface with a report viewer window titled "RFID Room Activity". The report lists "All Message Room 1" with two entries: "Tag Read" and "Tag Read". It also lists "All Message Room 2" with three entries: "Tag Read", "Tag Read", and "Tag Read". The report includes columns for Date/Time, Tag ID, Model, Serial Number, Tag ID, and Total/Last/First Received/Last Read.

Room Activity Report

Additional Reports

Seven reports have been added, providing IT professionals with more options and greater flexibility for tracking assets, rooms and people. These new reports include:

- Device Activity
- Room Activity
- Device Location
- Tag Battery Level
- Device Inventory
- Control System Inventory
- System Users

Greater Scalability

MeetingMangaer can now support up to 1,000 meeting rooms and approximately 10,000 assets.

Anterus RFID Solution

Anterus uses Radio Frequency IDentification (RFID) technology to provide AMX customers with capabilities that have never before been available.

The Anterus system consists of an RFID Reader, which connects to the AMX NetLinx® Controller, and a choice of RFID tags – either an Asset Tag or ID Badge – which are attached to devices or worn by people to identify and track location, keep assets secure and trigger events.

Anterus was designed to enhance RMS for the ultimate in device management, monitoring and scheduling.

MeetingManager at a Glance

Customize Your Room and its Equipment

Custom configure your room by building presets that direct certain equipment and technologies to operate during your meeting. Modify appointment details anywhere, at any time.

Schedule Rooms

MeetingManager combines flexible scheduling with powerful equipment configuration capabilities to make room preparation effortless. Check a room's daily, weekly or monthly availability, reserve your room and schedule your projector to be up and running or music to be playing as your guests arrive.

Proactively Administer

MeetingManager constantly monitors equipment in your system and, in real time, reports any disturbances in functionality by paging or generating an email to the appropriate member(s) of your support staff. Administrators and technicians may also view system status in real time from any location using a browser-based console.

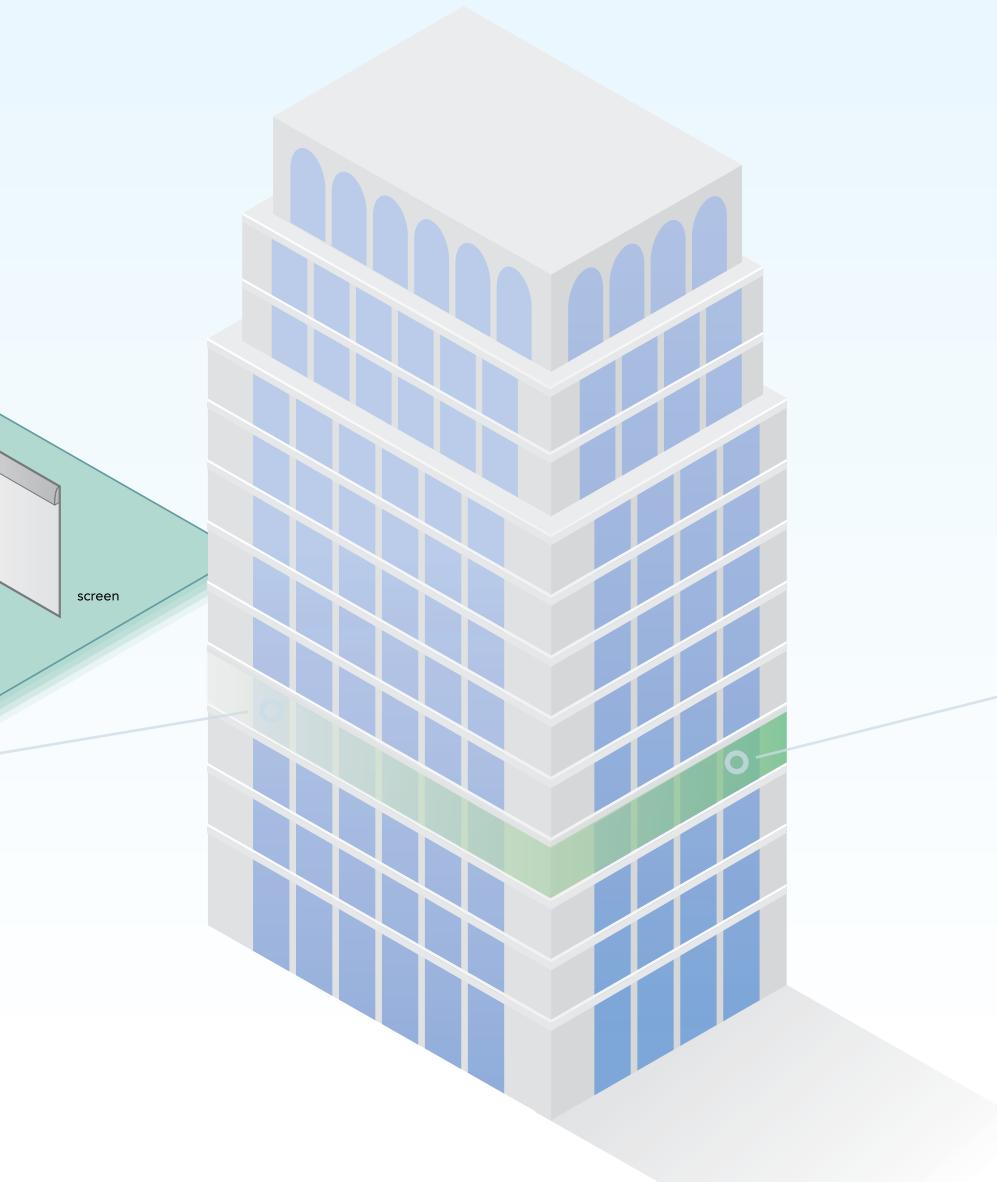

View and Track Devices

Track projector lamp hours and/or device usage in each room to facilitate preemptive maintenance and reduce equipment downtime. By adding Anterus RFID Tags, the physical location of these devices can also be viewed. The system can even send an instant notification via email or page to select individuals when the device is removed from its specified zone.

OTHER MEETINGMANAGER APPLICATIONS

EXTRON® & RMS IP LINK MeetingManager seamlessly communicates with Extron IP Link®-enabled and AMX-enabled rooms. Now you can monitor all A/V equipment and related control systems across a building or campus from one location, providing a higher level of device security and significantly increasing staff efficiency.

RMS PLANON AND R25 INTERFACES MeetingManager seamlessly communicates through scheduling software and displays appointment information on all AMX Modero® Touch Panels. In addition to providing all of the A/V equipment management and monitoring features native to MeetingManager, you can also schedule events to initiate presents and provide electronic signage capabilities directly from the touch panels.

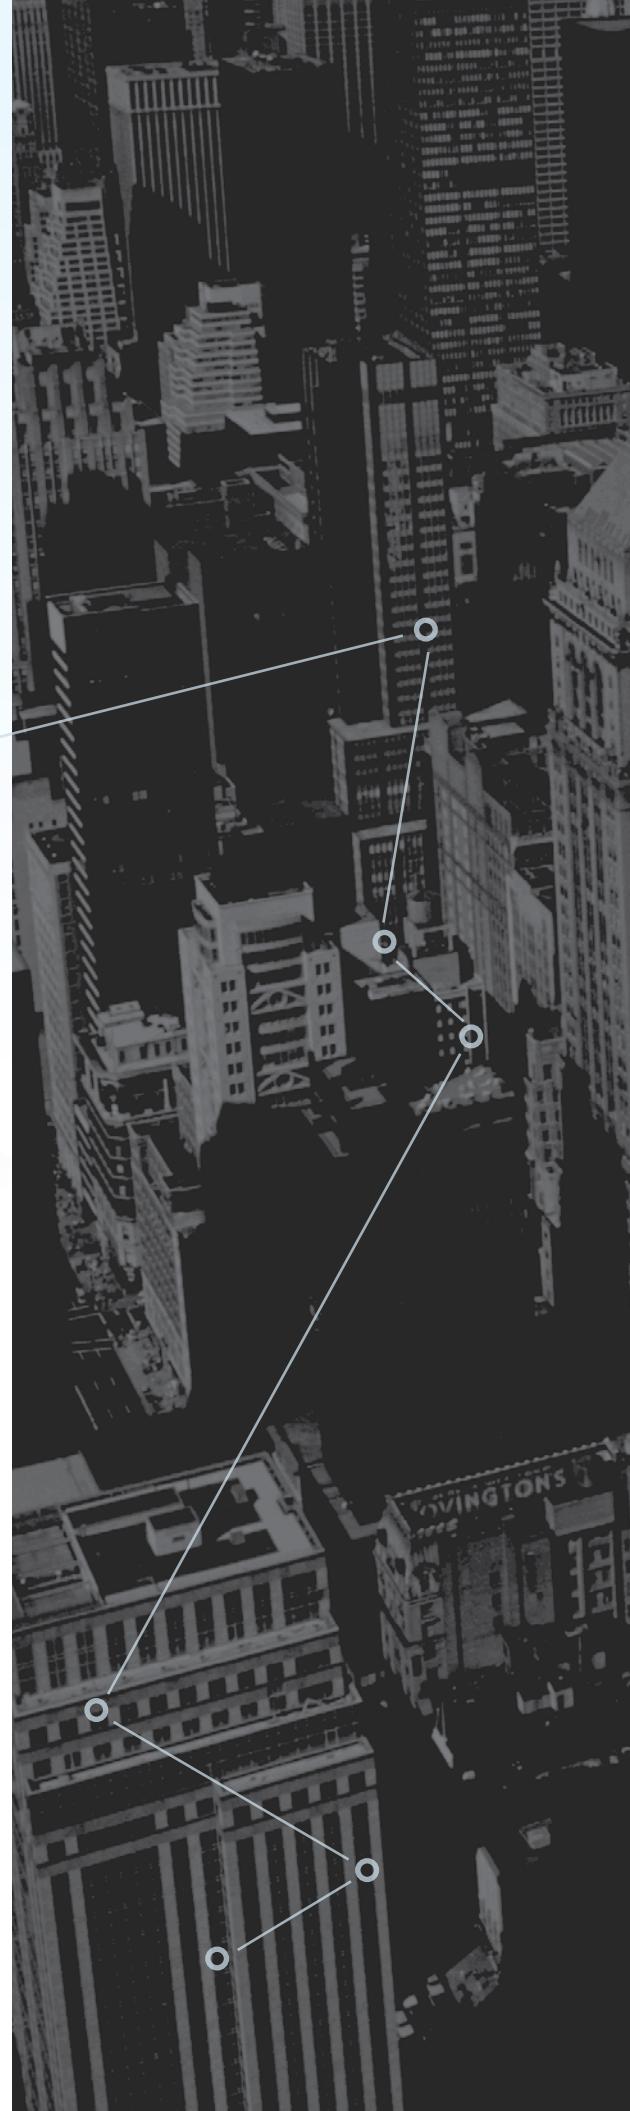

Flexible, Intuitive Interface MeetingManager's point-and-click interface makes it easy to find what you are looking for with simple-to-understand text descriptions. A Web-based interface allows access for multiple users from any location, even operating simultaneously.

Asset Security MeetingManager keeps your investments secure by sending instant alerts when assets – such as a projector or mobile A/V cart – are unplugged or relocated. Additionally, feel secure knowing that the administrative functions are password protected.

Notification Groups Administrators can monitor devices by assigning them to 14 different notification parameters (security, maintenance, network, etc.) and sort within these notification groups based on device type, room or group.

Simple Network Management Protocol (SNMP) Support This industry standard protocol allows IT administrators to execute remote diagnostics, manage performance and plan for network growth – all in a clear, definitive and intuitive format.

Redundant Server with Failover Support To minimize server downtime, MeetingManager will enable the deployment of several backup methods to protect your data.

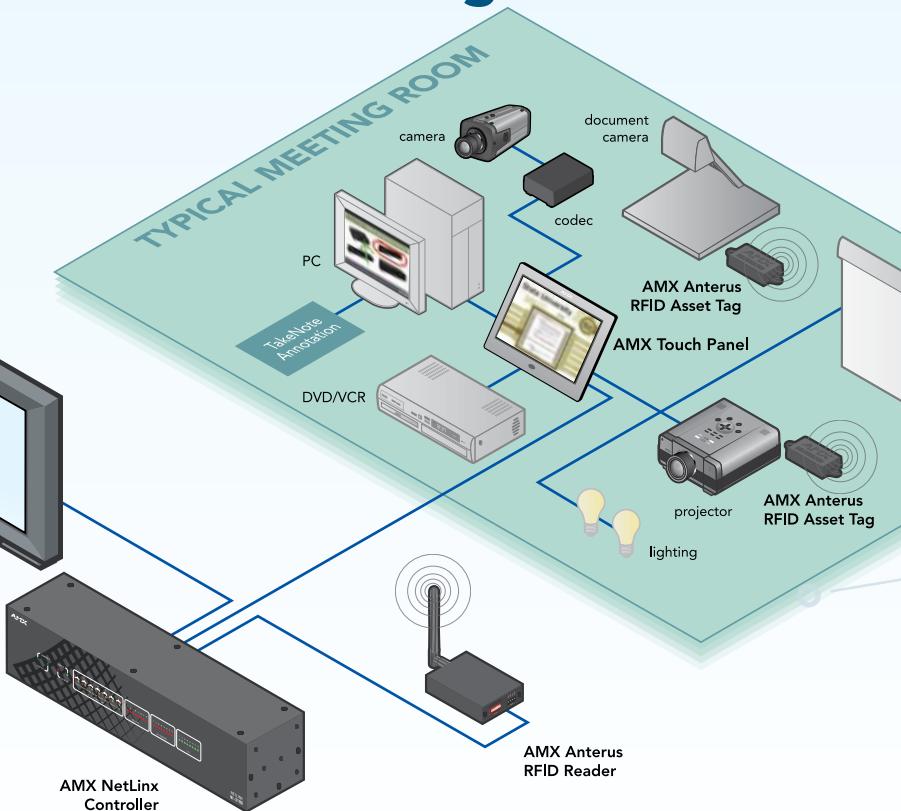

Managing, monitoring and tracking assets and meeting room schedules is an essential process for any business seeking to optimize its presentation, conferencing and educational operations. MeetingManager, part of the Resource Management Suite from AMX, is an enterprise-level, server-based software solution for corporate IT professionals, facility managers and meeting room users.

The AMX Resource Management Suite is a line of software solutions designed for IT professionals, facility managers and meeting/classroom users looking for a way to manage, monitor and/or schedule up to 1,000 rooms and 10,000 assets.

Save Time and Resources While Increasing Your ROI

Equipment Monitoring and Proactive Maintenance MeetingManager® constantly monitors equipment in your system and, in real time, reports any disturbances in functionality by paging or generating an email to the appropriate member(s) of your staff. System status may also be viewed in real time from any location using a browser-based console.

Multilingual Support MeetingManager supports eight languages - Chinese, Dutch, English, French, German, Italian, Japanese and Spanish - and localizes based on the user's installed operating system.

Meeting Room Scheduling and Configuration MeetingManager combines scheduling, equipment configuration and customized touch panel signage to make room preparation a snap. Appointments can be set three ways: directly from the AMX Touch Panel outside the room; via Microsoft Outlook/Exchange®, GroupWise®, Lotus Notes®, R25® or Planon; or directly in MeetingManager. Either way, the reservation is communicated back to the scheduling server. With MeetingManager, you can check a room's daily, weekly or monthly availability; reserve your room; and schedule your projector to be up and running as your guests arrive.

Maintaining Data MeetingManager works seamlessly with your database server to log data, create a variety of instant reports and export log data for customized reporting. Only AMX supports SQL Express, which eliminates the need for a dedicated SQL Server.

Instant, Web-Based Reports Remain organized and efficient by tracking equipment usage and performing preventative maintenance.
